P.R.A.M.A.N

SECTION-WISE FORENSIC WORKFLOW & SEPARATE UPLOAD PHOTOS

Case CR-2026-9042 | Simulated financial server intrusion | Academic demonstration

This document provides one dedicated page per stage, with a separate visual asset for each. The pictures and interface screenshots are illustrative mockups, not authentic evidence, real system screenshots or verified cryptographic outputs.

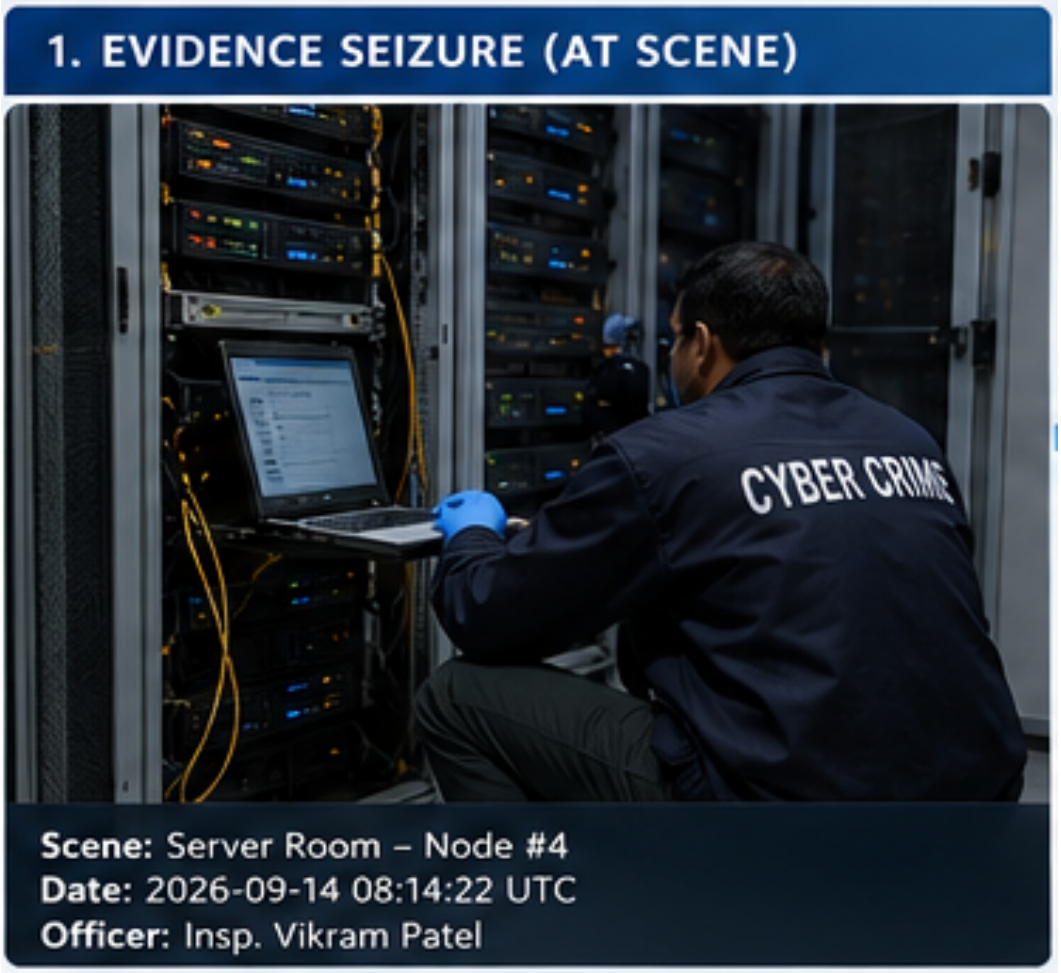

Important: The original report uses Section 65B terminology. For current Indian proceedings, verify the applicable Bharatiya Sakshya Adhiniyam, 2023 provisions and required certificate format with qualified legal guidance.

01 | Scene Examination

Responsible role: Inspector Vikram Patel

What happens in this section

Photograph the server room and identify Rack #04, the console, connected devices and access points. Record the observation time and camera identifier.

Separate photo / screen file: Scene photo (reference): 01_scene_seizure.png

What to upload or generate: Capture original CCTV export, not a recreated still. Record camera source, UTC timestamp, acquisition method and operator.

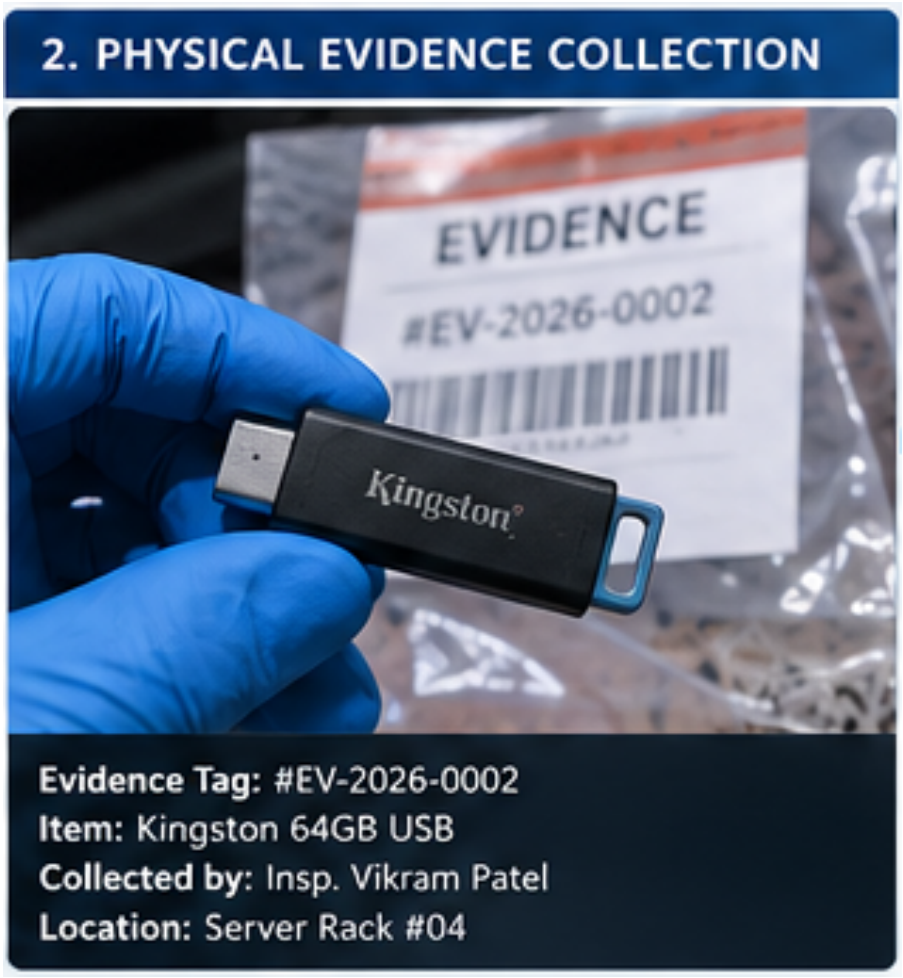

Viva demonstration: Explain the action, show the corresponding screen, then open the evidence record or audit entry to prove it was saved.

02 | Physical USB Seizure

Responsible role: Inspector Vikram Patel

What happens in this section

Photograph the seized USB with a ruler and evidence tag EV-2026-0002. Seal and record packaging, collector, location and time.

Separate photo / screen file: Evidence photograph (reference): 02_usb_collection.png

What to upload or generate: Upload the original evidence photograph; record USB make, model, serial number and seal number separately.

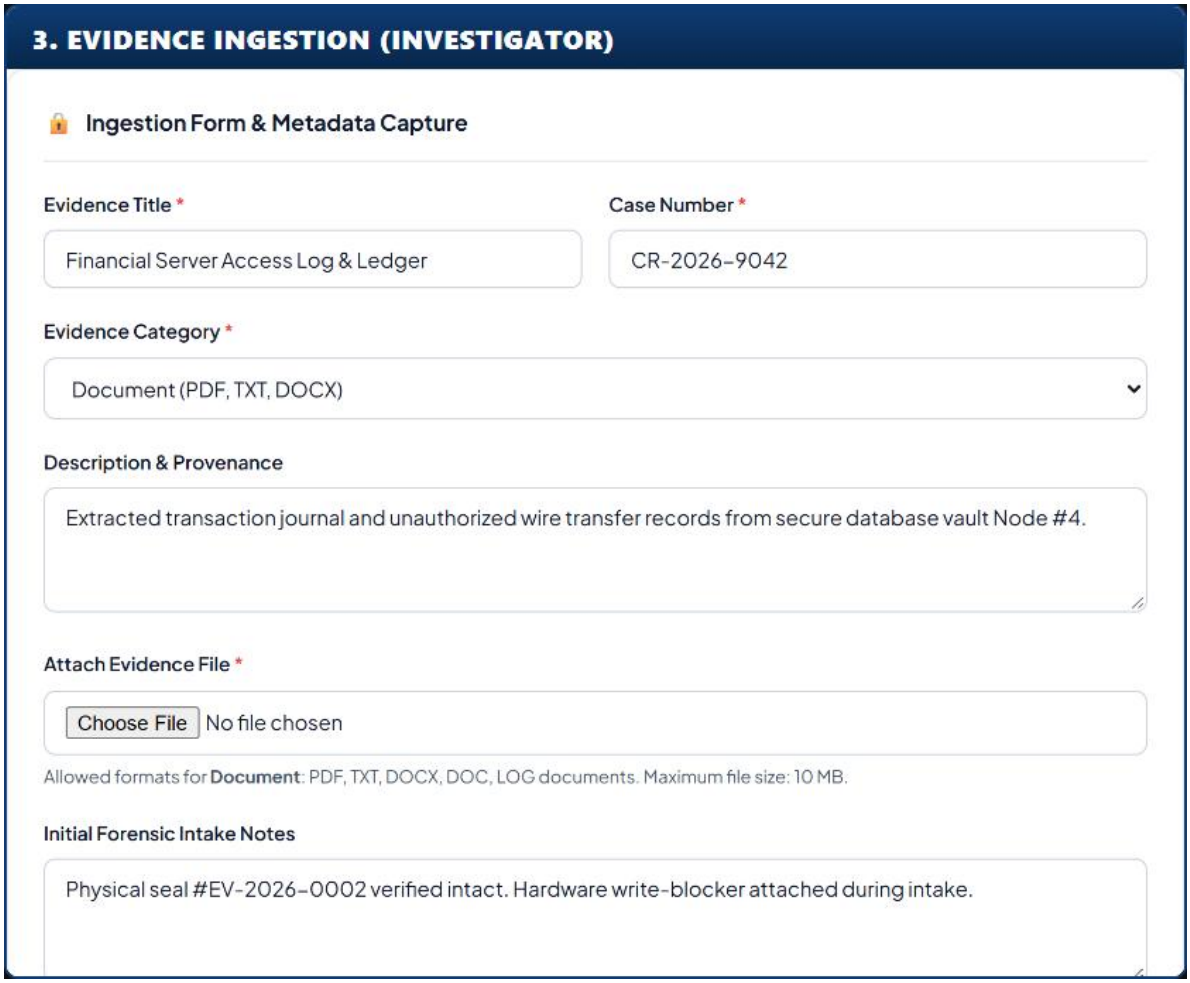

Viva demonstration: Explain the action, show the corresponding screen, then open the evidence record or audit entry to prove it was saved.

03 | Evidence Ingestion

Responsible role: Investigator

What happens in this section

Create case CR-2026-9042 and upload each digital exhibit independently. Capture filename, media type, file size, uploader, acquisition time and storage reference.

Separate photo / screen file: Website screenshot (reference): 03_evidence_upload.png

What to upload or generate: Upload original CCTV image/video, USB acquisition image if available, and raw server audit log as separate exhibits.

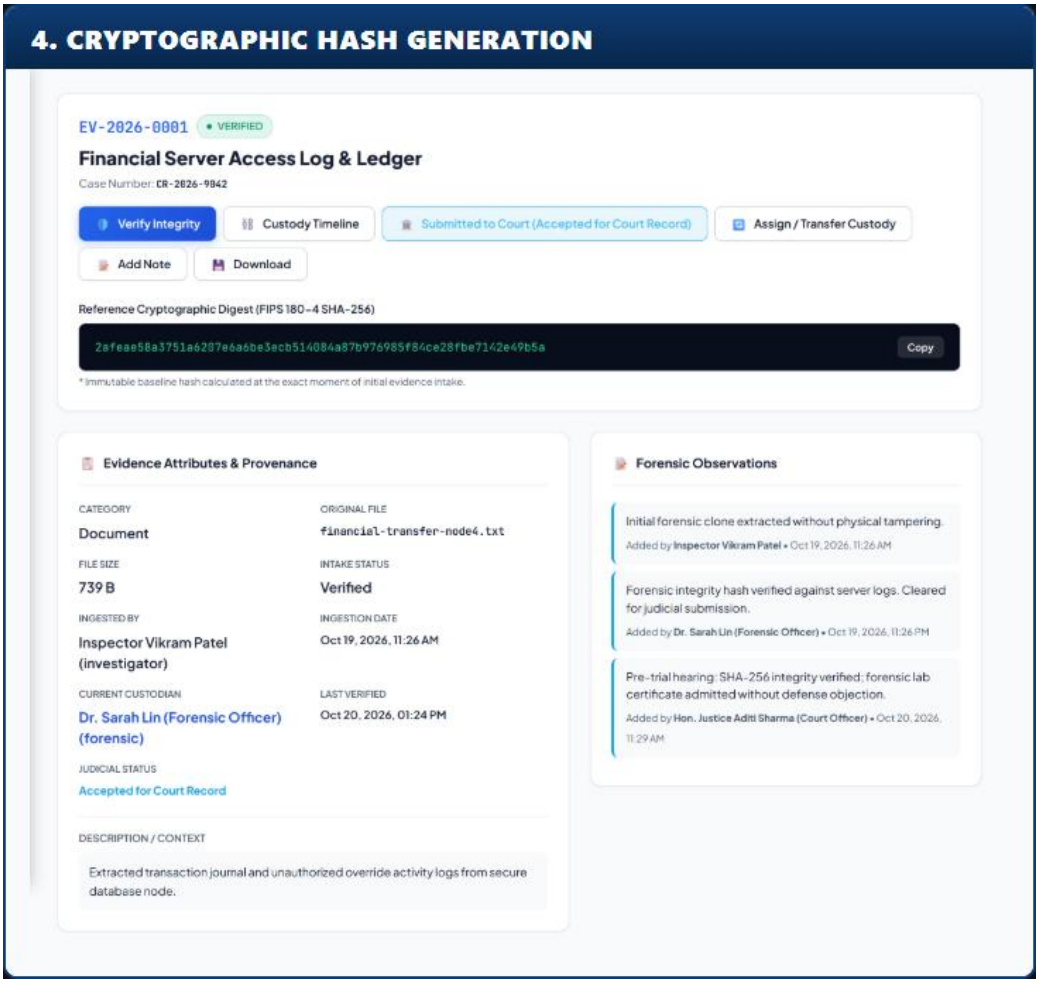

Viva demonstration: Explain the action, show the corresponding screen, then open the evidence record or audit entry to prove it was saved.

04 | SHA-256 Baseline

Responsible role: Backend / Investigator

What happens in this section

Compute SHA-256 from the exact uploaded bytes. Store digest, byte length, storage object ID and timestamp with the evidence record.

Separate photo / screen file: Website screenshot (reference): 04_sha256_hash.png

What to upload or generate: Show the actual computed hash generated by the running application, not the example hash visible in the mockup.

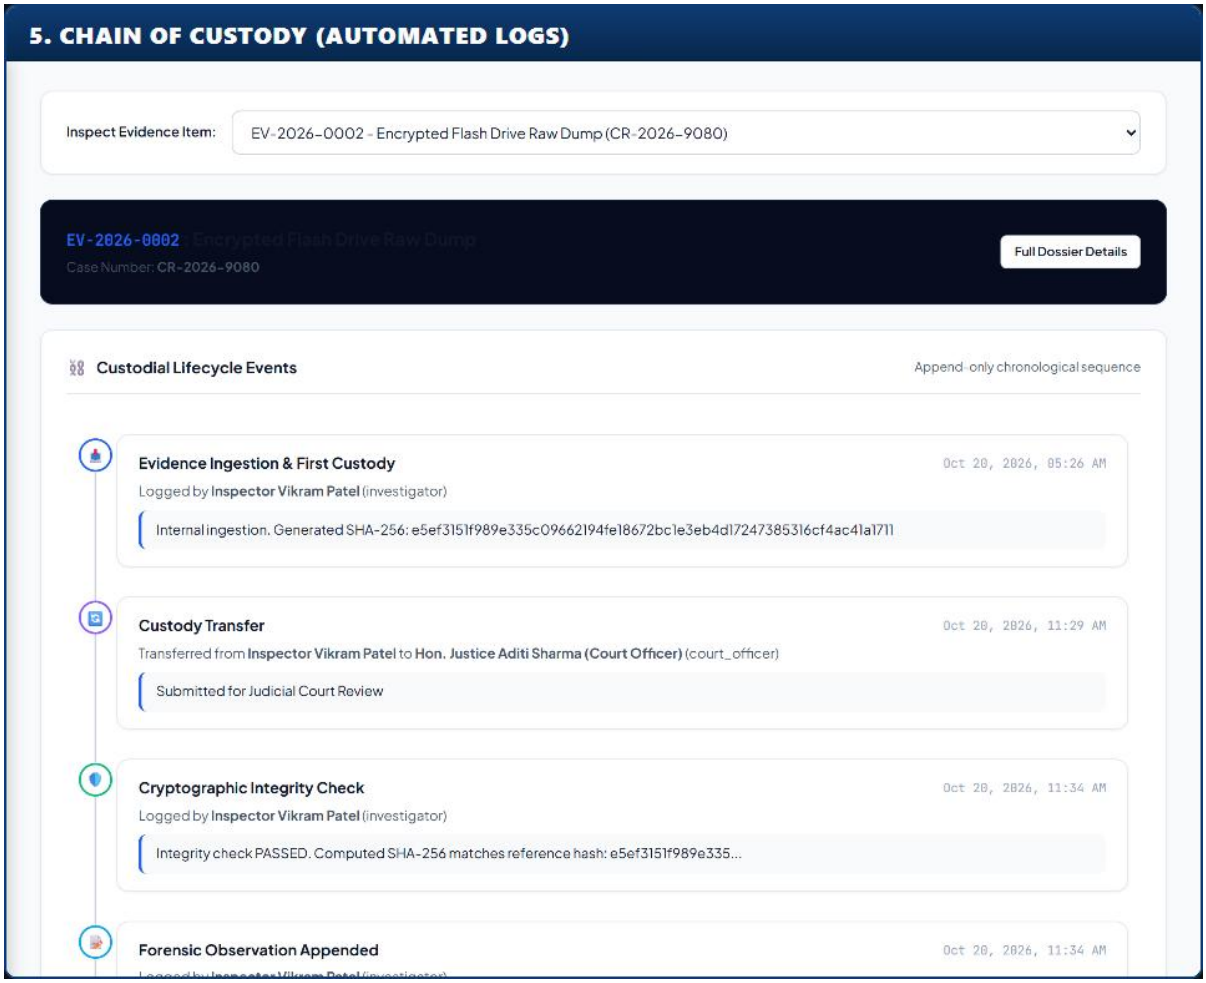

Viva demonstration: Explain the action, show the corresponding screen, then open the evidence record or audit entry to prove it was saved.

05 | Chain of Custody

Responsible role: Investigator to Forensic Officer

What happens in this section

Request transfer to Dr. Sarah Lin; record transfer reason, sender, recipient, time, acknowledgement and evidence seal condition.

Separate photo / screen file: Website screenshot (reference): 05_chain_of_custody.png

What to upload or generate: No file upload required for the transfer itself; attach signed receipt or transfer photo if available.

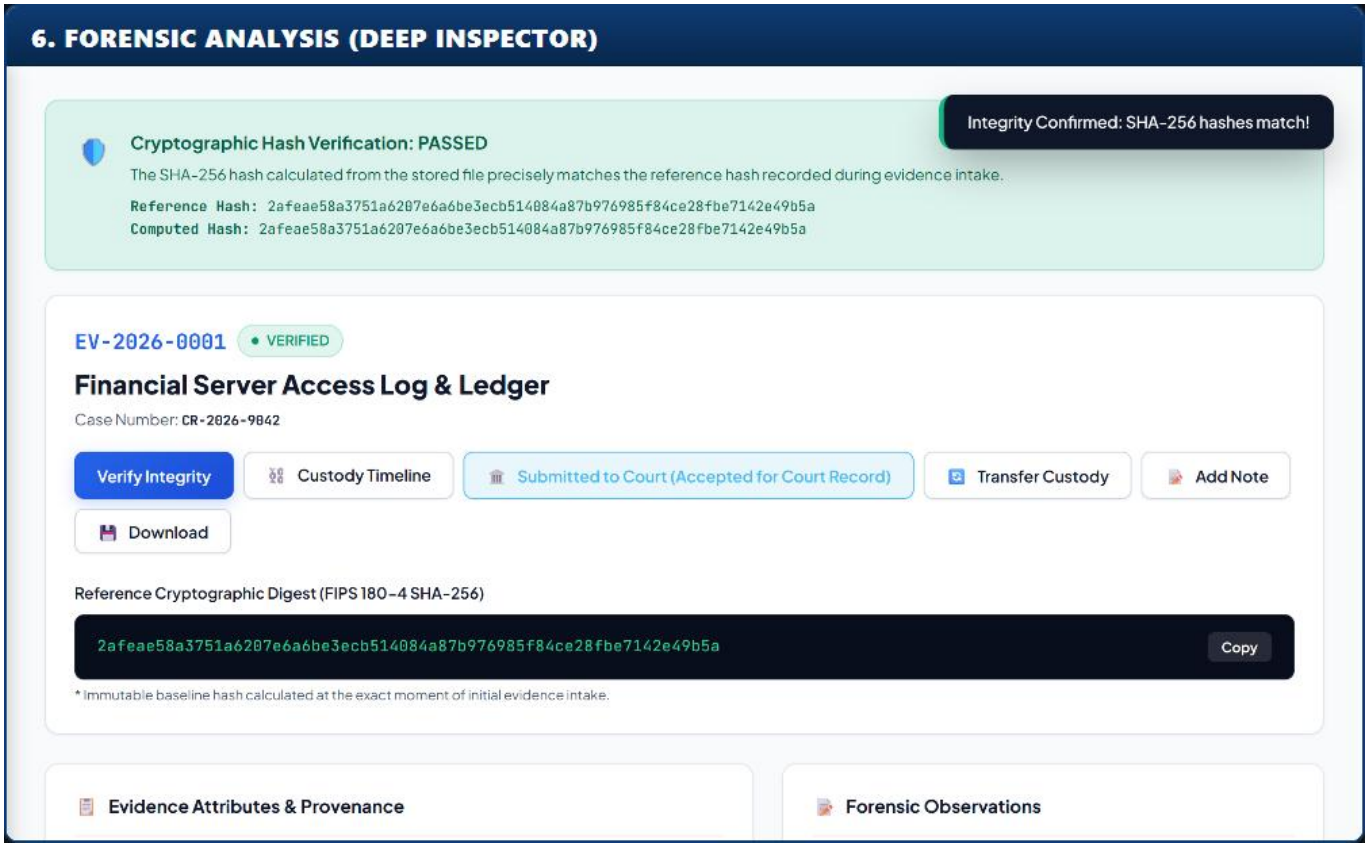

Viva demonstration: Explain the action, show the corresponding screen, then open the evidence record or audit entry to prove it was saved.

06 | Forensic Integrity Inspection

Responsible role: Dr. Sarah Lin

What happens in this section

Run a fresh SHA-256 on the preserved evidence object and compare with the original baseline. Document matching or mismatching values.

Separate photo / screen file: Website screenshot (reference): 06_forensic_inspection.png

What to upload or generate: Upload analysis notes and a real hash-verification output. Preserve originals; analyze forensic copies.

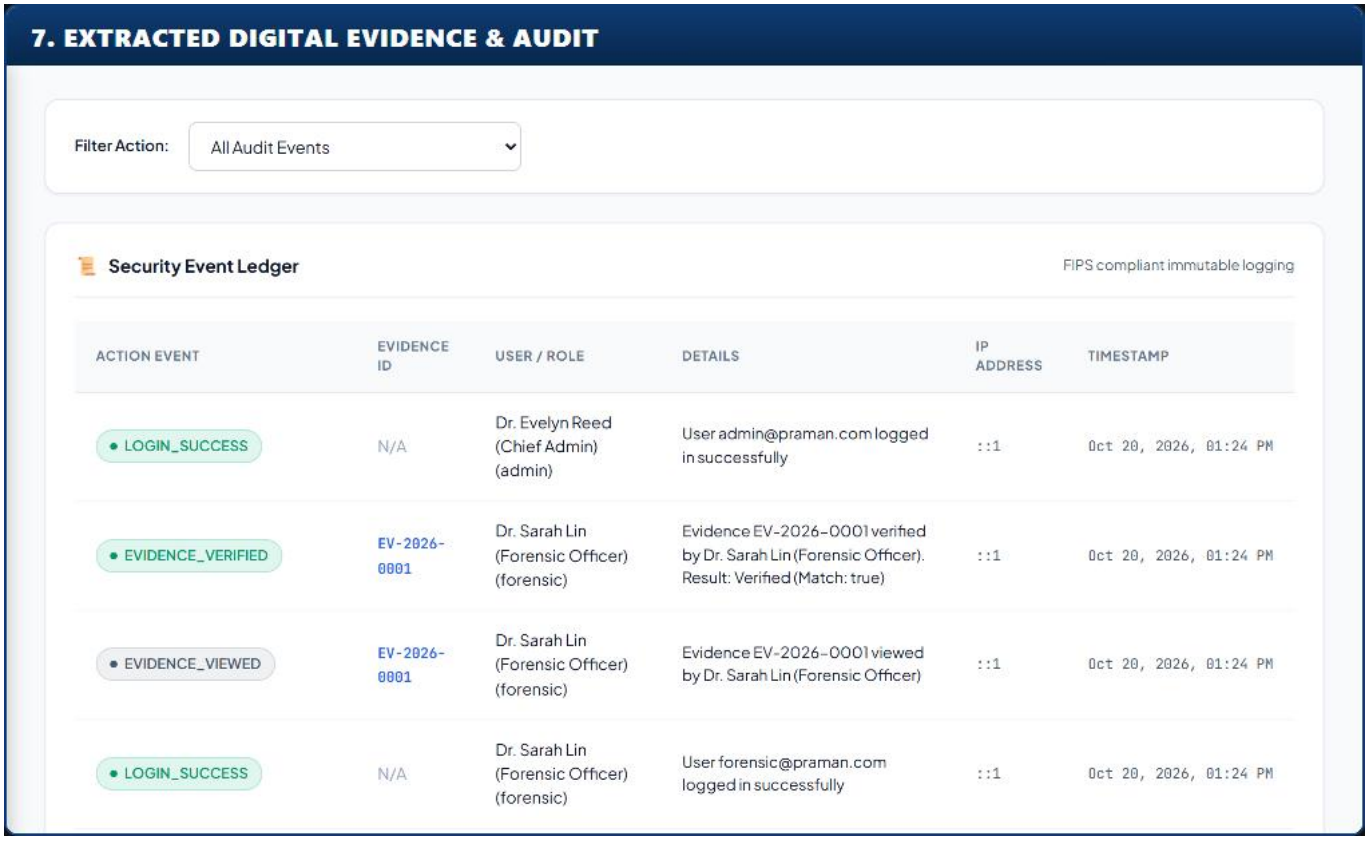

Viva demonstration: Explain the action, show the corresponding screen, then open the evidence record or audit entry to prove it was saved.

07 | Audit Log Analysis

Responsible role: Dr. Sarah Lin

What happens in this section

Inspect server logs and correlate login, transaction, command and sensor events. Treat log entries as allegations requiring independent corroboration.

Separate photo / screen file: Example file view (reference): 07_extracted_logs.png

What to upload or generate: Upload original raw log (.txt/.log) as an independent exhibit; label sample logs as synthetic.

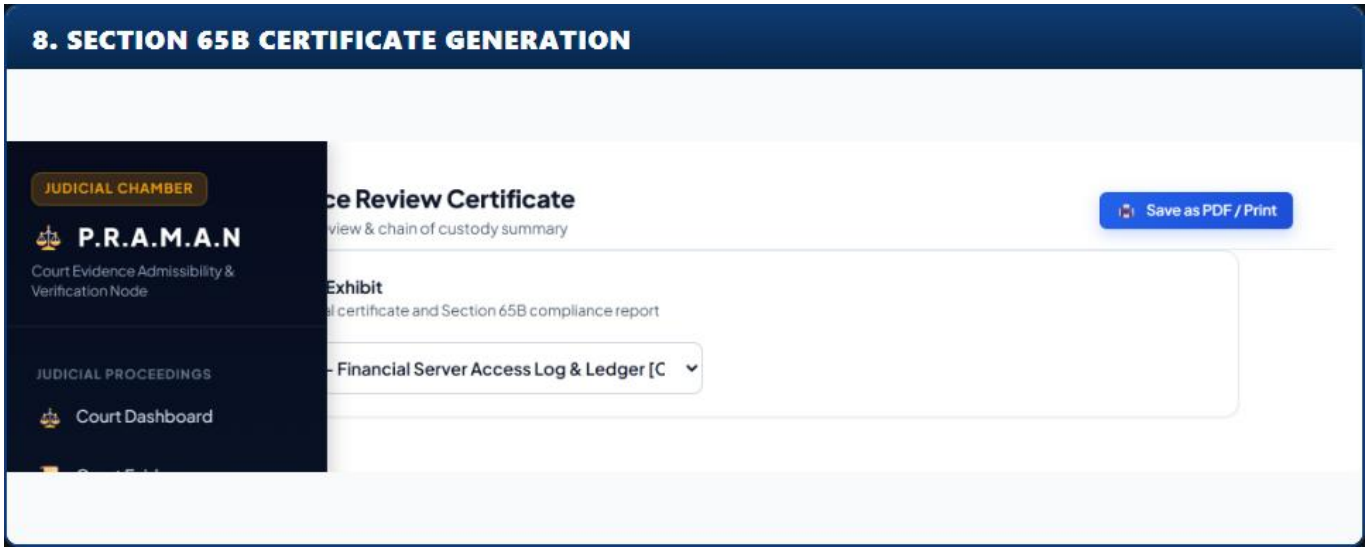

Viva demonstration: Explain the action, show the corresponding screen, then open the evidence record or audit entry to prove it was saved.

08 | Certificate Preparation

Responsible role: Authorized Certifier

What happens in this section

Prepare the electronic-record certificate with system particulars, production method, device details and required declarations.

Separate photo / screen file: Website screenshot (reference): 08_certificate_generation.png

What to upload or generate: Generate a draft PDF and supporting machine-readable metadata; do not automatically imply legal validity.

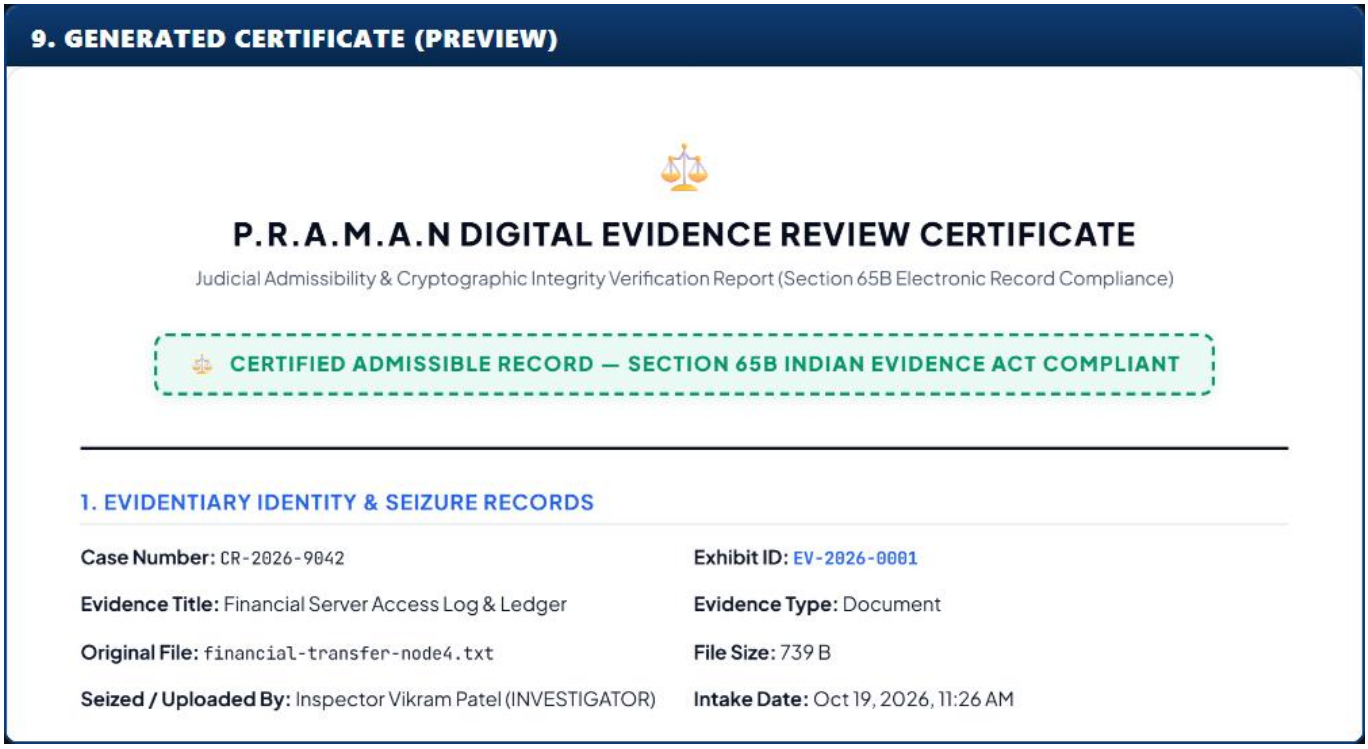

Viva demonstration: Explain the action, show the corresponding screen, then open the evidence record or audit entry to prove it was saved.

09 | Certificate Review

Responsible role: Authorized Certifier

What happens in this section

Check exhibit identifiers, hash values, acquisition context, signatures and legal framework before signing.

Separate photo / screen file: Document mockup (reference): 09_certificate_preview.png

What to upload or generate: Upload only an actually signed certificate for real proceedings; mock seals and signatures are demonstration-only.

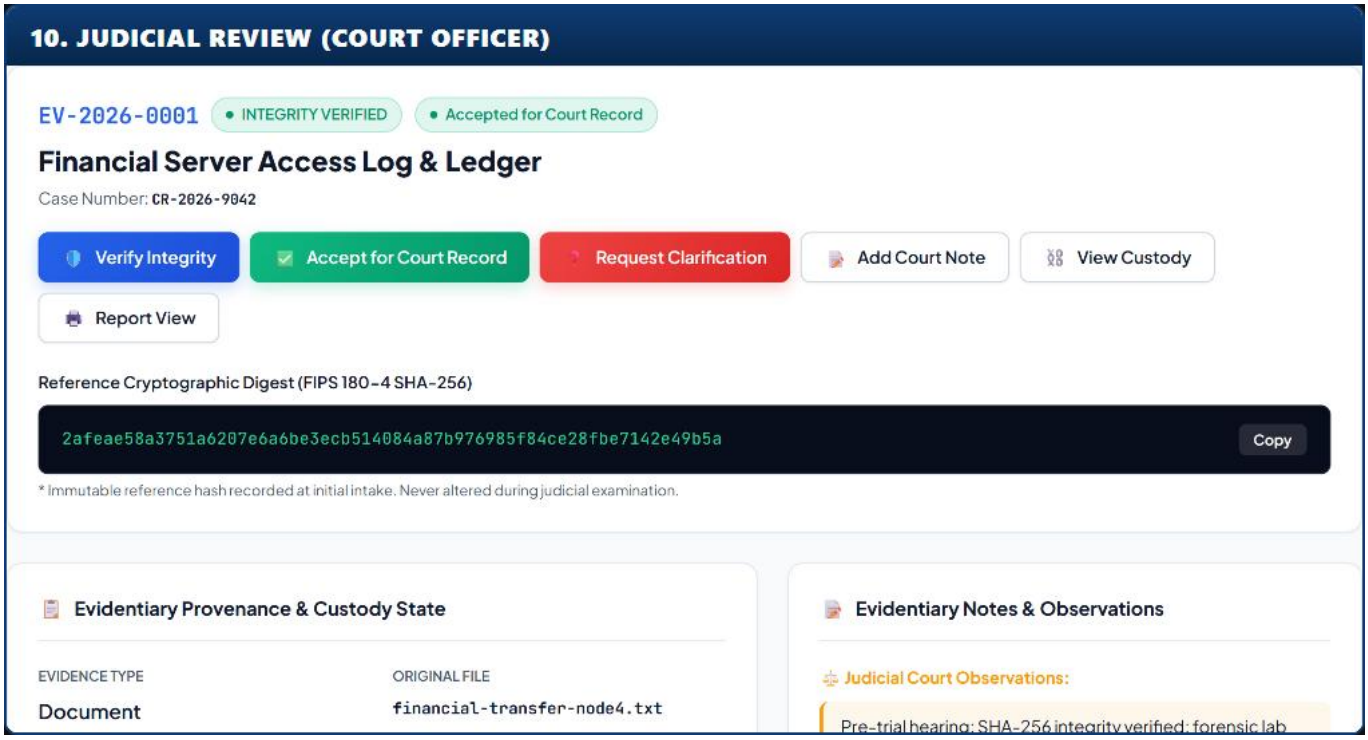

Viva demonstration: Explain the action, show the corresponding screen, then open the evidence record or audit entry to prove it was saved.

10 | Judicial Docket Review

Responsible role: Court Officer / Reviewer

What happens in this section

Review evidence, provenance, verification results and certificate status. Record acceptance, clarification requests or rejection with reasons.

Separate photo / screen file: Website screenshot (reference): 10_judicial_review.png

What to upload or generate: No evidence re-upload needed; export the case bundle, audit trail and decision record.

Viva demonstration: Explain the action, show the corresponding screen, then open the evidence record or audit entry to prove it was saved.
